### **Application for Full Stack Developer Position**

Dear Hiring Manager,

I am writing to express my interest in the Full Stack Developer position. I hold a B.Sc. in Computer Science from The Chinese University of Hong Kong and have hands-on experience developing production-grade software at GaiaMine Limited and Deloitte Advisory. My work blends full-stack engineering, system design, and problem-solving in high-impact environments.

At GaiaMine Limited, I contributed to the development of a tokenization platform enabling sustainable mining projects to raise investments through digital assets. I designed and implemented core modules for project creation, KYC verification, authentication, and FIAT–blockchain transaction flows. Working across the React (TypeScript) frontend and Node.js / MongoDB backend, I focused on performance, reliability, and security. I also containerized the system with Docker and automated deployments using GitHub Actions, reducing release time by 60% and maintaining 99% uptime.

At Deloitte Advisory, I developed internal tools to automate data privacy and risk assessments for enterprise clients. I built RESTful APIs with Node.js and PostgreSQL, integrated them with React-based dashboards, and optimized database queries to improve performance. Collaborating with cybersecurity teams, I also worked on data loss prevention (DLP) features and secure code reviews, strengthening my understanding of secure backend architecture.

Outside of work, I continue to explore intelligent automation through personal projects such as a Task Manager Web App and a Mail AI Agent powered by the Gemini API. These experiences reinforce my passion for building systems that are technically rigorous and user focused.

I would welcome the opportunity to bring this mindset—and my experience in full-stack development and scalable software systems—to your team. Thank you for your time and consideration.

Warm regards,

Sanjana Mahmood
