

SANJANA MAHMOOD

852-59607512 | sanjana.mahmood10@gmail.com | GitHub: smahmood00 | LinkedIn: [SanjanaMahmood](#)

TECHNICAL SKILLS

- Languages: Python, JavaScript
- Web & APIs: FastAPI, Flask, React, Node.js
- Database: MySQL, MongoDB, PostgreSQL
- Tools and Cloud: Git, Docker, Linux, Agile

WORK EXPERIENCE

Software Developer | GaiaMine Limited

April 2024-Present

- Built and maintained a tokenization platform for sustainable mining investments, integrating blockchain technology, smart contracts, and FIAT payment gateways.
- Architected and developed the full-stack application using React, TypeScript, Node.js, MongoDB, achieving 99% uptime in production.
- Designed Docker-based CI/CD pipelines with GitHub Actions, reducing deployment failures by 60% and automating version rollouts.

Cyber Risk Analyst | Deloitte Advisory (Hong Kong) Limited

Sept 2023 – Sept 2024

- Developed a Data Privacy assessment platform for clients Developed a data privacy assessment platform using React, Survey.js, Node.js, PostgreSQL to automate client compliance reviews.
- Optimized backend queries and refactored codebase, reducing SQL execution time and improving performance by 15%.
- Implemented and monitored Forcepoint DLP solution to detect and prevent data leakage across managed client environments.

Research Assistant (Internship) | The Chinese University of Hong Kong

June 2022-Aug 2022

- Designed and implemented a real-time human pose estimation pipeline using PyTorch, OpenCV, and FastAPI to predict aerosol spread patterns from RGB-D data.
- Built a 3D reconstruction service with Open3D, reducing visualization latency by 35% via asynchronous streaming.
- Deployed and validated the model on live camera feeds for in-lab demonstrations.

PROJECTS

Task Manager Web App (Next.js, Node.js, PostgreSQL, Redis)

- Designed and built a personal full-stack task management platform with authentication, caching, and analytics dashboard.
- Improved dashboard load time by 40% via Redis caching and optimized SQL queries; containerized and deployed using Docker & GitHub Actions.

Mail AI Agent (Gemini API, FastAPI, Gmail API, PostgreSQL)

- Built an AI-powered email management agent using Gemini API, FastAPI and Gmail API to autonomously categorize, summarize, and draft replies to incoming emails.
- Designed multi-step reasoning pipeline combining LLM planning with tool invocation for email triage and response generation.
- Achieved 85% accuracy in classification across 5 categories (*Urgent, Action Required, FYI, Meeting, Spam*) based on user-labeled validation.

EDUCATION

B.Sc. in Computer Science | The Chinese University of Hong Kong

Sept 2019- July 2023

- Relevant coursework: Fundamentals of Applied Deep Learning| AI and Machine Learning | Web Applications | Data Science | Database Management | Operating Systems | Data Structures | Probability and Statistics
- Scholarships: Belt and Road Scholarship Hong Kong, Faculty of Engineering Scholarship CUHK

**Career gap between Sept 2024 and Dec 2024 because of travelling back to home country for family urgency*
